DETAILED ACTION

1. This is the final Office action based on the 10/561842 application filed on December 22, 2005.

2. Claims 1-4 are pending and have been fully considered. Claims 5-9 have been canceled.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over TOYODA (US 2003/0171481).

TOYODA discloses a polyolefin wax for a coating material which comprises a specific ethylene copolymer. The ethylene copolymer is an ethylene homopolymer or a copolymer of ethylene and an α–olefin or more than one α–olefin. Examples of the α–olefin include propene, 1-butene, 1-pentene, and so on (paragraph 0035-0036). The ethylene polymer which is an ethylene homopolymer or an ethylene/α-olefin copolymer, in which the number average molecular weight is within the range of from 400 to 8000 as measured by gel permeation chromatography (GPC), Mn/Mw is no greater than 4 (paragraph 0021). The ethylene copolymer is manufactured using a vanadium catalyst or a metallocene catalyst (paragraph 0017). The polyolefin wax for coating material

Application/Control Number: 10/561,842

Art Unit: 1797

comprises the ethylene copolymer which is solid at room temperature and becomes a low-viscosity liquid at or above a temperature of from 80 to 120° C (paragraph 0044). The composition easily satisfies the formula in claim 2 (-0.53ts + 62 > Y > -0.53Ts + 53 which equals 9 > Y > -9). In paragraph 0042 TOYODA discloses that in the ethylene copolymer Y is the penetration hardness (dmm).

Page 3

TOYODA discloses metallocene compounds which constitutes the metallocene catalyst is a metallocene compound of a transition metal selected from Group IV of the periodic table.

TOYODA gives various examples of the production of ethylene α -olefin copolymers. Examiner reasons it would have been obvious to one having ordinary skill in the art when using the data of examples a1 through a24 of TOYODA with the combination of information throughout the reference.

TOYODA also discloses production of modified ethylene copolymer for example a polyethylene wax (~ 6.81 parts by weight) with 1-butene. As a result, a maleic-anhydride-modified polyethylene, having an acid value of 60 KOH (mg/g) (~.6 KOH mg/g when using parts by weight of polyethylene wax), an intrinsic viscosity [η] of 0.17 (dl/g) (measured at the 135°C in decalin) and a melting point of 110°C was obtained (paragraphs 0278-0280).

Once the amount of polyolefin wax has been contained it can be added in any step of the processes conventionally used for manufacturing printing inks such as kneading to form an ink or the polyolefin wax can be blended with a

Art Unit: 1797

material that has undergone dispersion and kneading processes to form an ink (molding) (paragraph 0110).

Response to Arguments

5. Applicants' arguments filed August 14, 2009 have been fully considered but they are not persuasive.

Applicants argued the reference applied under 35 USC 103, Toyoda, fails to explicitly or implicitly teach the specific softening point and density of present claim 1 resulting in high shrinkage ratios. This is not deemed to be persuasive because the examiner is not relying upon just the examples of Toyoda. Toyoda meets the limitations of claim 1 throughout the entirety of the reference, case in point: (1) gel permeation chromatography (GPC), Mn/Mw is no greater than 4 (paragraph 0021) (2) ethylene copolymer is an ethylene homopolymer or a copolymer of ethylene and an α -olefin or more than one α -olefin (3) the polyolefin wax for coating material comprises the ethylene copolymer which is solid at room temperature and becomes a low-viscosity liquid at or above a temperature of from 80 to 120°C (softening point) (paragraph 0044) (4) the penetration hardness is -9<Y<9 (5) the density is in the range of 850 kg/m³ to 980 kg/m³. The results set forth in the examples in the Declaration under 37 CFR 1.132 have been carefully considered; however, the invention of Toyoda is not limited to the examples. Thus the examiner maintains the position that Toyoda meets the limitations of claims 1-4.

Art Unit: 1797

The examiner is of the position a reference is good not only for what it teaches but also for what one of ordinary skill might reasonably infer from the teachings. *In re Opprecht* 12 USPQ 2d 1235, 1236 (CAFC 1989); *In re Bode* USPQ 12; *In re Lamberti* 192 USPQ 278; *In re Bozek* 163 USPQ 545,549 (CCPA 1969); *In re Van Mater* 144 USPQ 421; *In re Jacoby* 135 USPQ 317; *In re LeGrice* 133 USPQ 365; *In re Preda* 159 USPQ 342 (CCPA 1968). In addition, "A reference can be used for all it's realistically teachings and is not limited to the disclosure in its preferred embodiments" See *In re Van Marter*, 144 USPQ 421.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicants are reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to LATOSHA HINES whose telephone number is 571-270-

Art Unit: 1797

5551. The examiner can normally be reached on Monday thru Thursday from 8 a.m. to

5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Michael Marcheschi can be reached on 571-272-1374. The fax phone

number for the organization where this application or proceeding is assigned is 571-

273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
